- Rest APIs
- SQL
- NoSQL
- MongoDB
- AWS
- GitHub
- GraphQL
- Bootstrap
- jQuery
- Handlebars

WORK EXPERIENCE

Front-end Developer / Content Creator
Boutique Retailer

📅 May 2021 - current   📍 Melbourne, Vic

- Analyzed 30+ user requirements to derive technical software solutions to the application, Maropost Commerce Cloud.
- Created an App that renders the products specifics & their values to the Product page using eBay REST API and be able to update the selected information. This JavaScript app also checks the existing values across 10,000+ products and sends alerts according to the requirements.
- Developed a feature that creates an RMA (Return Merchandise Authorization) ticket on the Order page in Maropost Commerce Cloud, by retrieving data using REST APIs and automating the form fill. This feature saved 30% of time taken to create RMA by the Customer service department.
- Added 20+ mini upgrades to the business application for the users to access required information/links with less clicks.
- Refactored the eCommerce application using CSS, to custom align the view according to business needs.
- Added Product content/description for the eCommerce application with more than 10,000 products in the catalogue.
- Documented technical processes and procedures.

Test Analyst
Cognizant Technology Solutions

📅 2010 - 2012   📍 Chennai, India

- Planned and executed testing activities in Test management tool, HP Quality Center.
- Developed test plans and detailed test cases for more than 100+ business requirements.
- Logged and tracked the bugs in defect tracking tool, JIRA till closure.
- Performed tests for unit functionality, end to end, system integration and backend.
